

BOARD OF HEALTH FLOOR DRAIN REGULATION

Date of issuance: _____

Section I. PURPOSE OF REGULATION

Whereas:

- floor drains in industrial and commercial facilities are often tied to a system leading to a leaching structure or a septic system; and
- improper maintenance or inappropriate use of these systems may allow the passage of contaminants or pollutants entering the drain to discharge from the leaching structure or septic system to the ground; and
- discharges of hazardous wastes and other pollutants to floor drains leading to leaching structures and septic systems have repeatedly threatened surface and ground water quality throughout Massachusetts; and
- ground water resources in the Town of Holden contribute to public drinking water supplies.

The Town of Holden adopts the following regulation, under its authority as specified in Section II, as a preventative measure for the purposes of preserving and protecting the community's drinking water supply from discharges of pollutants to the ground via floor drains, and minimizing the threat of economic losses due to such discharges.

Section II. SCOPE OF AUTHORITY

The Board of Health adopts the following regulation pursuant to authorization granted by M.G.L. Chapter 111 Sections 31 and 122. This regulation shall apply to all new and existing facilities located within the Town of Holden/MassDEP approved Zone II(s).

Section III. DEFINITIONS

For the purposes of this regulation, the following words and phrases shall have the following meanings:

Commercial and Industrial Facility: A public or private establishment where the principal use is the supply, sale, and/or manufacture of services, products, or information, including but not limited to: manufacturing, processing, or other industrial operations; service or retail establishments; printing or publishing establishments; research and development facilities; small or large quantity generators of hazardous waste; laboratories; hospitals.

MassDEP: Massachusetts Department of Environmental Protection.

Discharge: The accidental or intentional disposal, deposit, injection, dumping, spilling, leaking, incineration, or placing of toxic or hazardous material or waste upon or into any land or water so that such hazardous waste or any constituent thereof may enter the land or waters of the Commonwealth. Discharge includes, without limitation, leakage of such materials from failed or discarded containers or storage systems and disposal of such materials into any on-site leaching structure or sewage disposal system.

Floor Drain: An intended drainage point on a floor constructed to be otherwise impervious which serves as the point of entry into any subsurface drainage, treatment, disposal, containment, or other plumbing system.

Leaching Structure: Any subsurface structure through which a fluid that is introduced will pass and enter the environment, including, but not limited to, dry wells, leaching catch basins, cesspools, leach fields, and oil/water separators that are not water-tight.

Oil/Water Separator: A device designed and installed to separate and retain petroleum based oil/grease, flammable wastes and sand particles from normal wastes while permitting normal sewage or liquid wastes to discharge into the drainage system by gravity. Other common names for such systems include MDC traps, gasoline and sand traps, grit and oil separators, grease traps, and interceptors.

Toxic or Hazardous Material: Any substance or mixture of physical, chemical, or infectious characteristics posing a significant, actual, or potential hazard to water supplies or other hazards to human health if such substance or mixture were discharged to land or waters. Toxic or hazardous materials include, without limitation, synthetic organic chemicals, petroleum products, heavy metals, radioactive or infectious wastes, acids and alkalis, and all substances defined as Toxic or Hazardous under Massachusetts General Laws (MGL) Chapter 21C and 21E or Massachusetts Hazardous Waste regulations (310 CMR 30.000), and also include such products as solvents, thinners, and pesticides in quantities greater than normal household use.

Use of Toxic or Hazardous Material: The handling, generation, treatment, storage, or management of toxic or hazardous materials.

Zone II: The delineated recharge area to a public drinking water well as approved by MassDEP and defined under the MA Drinking Water Regulations 310 CMR 22.00.

Section IV. PROHIBITIONS

With the exception of discharges that have received, or have applied and will receive, a MassDEP issued permit prior to the effective date of this regulation, no floor drain shall be allowed to discharge with or without pretreatment, such as an oil/water separator, to the ground, a leaching structure, or septic system in any industrial or commercial facility if such floor drain is located in:

- A. An industrial or commercial process area; or
- B. A petroleum, toxic, or hazardous materials and/or hazardous waste storage area; or
- C. A leased facility lacking either A or B as described above, but which has the potential for a change in use to one which has either A or B; and is in the opinion of the Board of Health or its Agent, sufficient to warrant the elimination of the ground discharge present at this facility.

Section V. REQUIREMENTS FOR EXISTING FACILITIES

- A. The owner of a facility in operation, prior to the effective date of this regulation, with a

prohibited floor drain system as defined in Section IV shall:

1. Where possible, disconnect and plug all applicable inlets to and outlets from applicable leaching structures, oil/water separators, and/or septic systems; and
2. Remove all existing sludge in oil/water separators, septic systems and, where accessible, leaching structures. Any sludge determined to be a hazardous waste shall be disposed of in accordance with state hazardous waste regulations, 310 CMR 30.000. Remedial activity involving any excavation and/or soil or groundwater sampling must be performed in accordance with appropriate MassDEP policies; and
3. Alter the floor drain system so that the floor drain shall be either:
 - (a). Connected to a holding tank that meets all applicable requirements of MassDEP policies and regulations, with hauling records submitted to the Board of Health at the time of hauling; or
 - (b). Connected to a municipal sanitary sewer line, if available, with all applicable MassDEP and local permits; or
 - (c). Permanently sealed. Any facility sealing a drain shall be required to submit for approval to the Board of Health a hazardous waste management plan detailing the means of collecting, storing, and disposing any hazardous waste generated by the facility, including any spill or other discharge of hazardous materials or wastes.

B. Any oil/water separator remaining in use shall be monitored weekly, cleaned not less than every 90 days, and restored to proper conditions after cleaning so as to ensure proper functioning. Records of the hauling of the removed contents of the separator shall be submitted to the Board of Health at the time of hauling.

C. Compliance with all provisions of this regulation must be accomplished in a manner consistent with Massachusetts Plumbing, Building, and Fire Code requirements.

D. Upon complying with one of the options listed under Section V.A.3, the owner/operator of the facility shall notify MassDEP of the closure by filing the UIC Pre-Closure Form BRP WS-06d (which may be obtained by calling MassDEP at 617-292-5770) and sending a copy to the Board of Health.

Section VI. EFFECTIVE DATES FOR ALL FACILITIES

The effective date of this regulation is the date posted on the front page of the regulation, which shall be identical to the date of adoption of the regulation.

A. Existing Facilities:

1. Owners and Operators of a facility affected by this regulation shall comply with all of its provisions within 180 days of the effective date; and

2. All applicable discharges to the leaching structures and septic systems shall be discontinued within 30 days of the effective date through temporary isolation or sealing of the floor drain.

B. New Facilities:

1. As of the effective date of this regulation, all new construction and/or applicable change of use within the Town of Holden shall comply with the provisions of this regulation.
2. Certification of conformance with the provisions of this regulation by the Board of Health shall be required prior to issuance of construction and occupancy permits; and
3. The use of any new oil/water separator shall comply with the same requirements as for existing systems, as specified above in Section V.B.

Section VII. PENALTIES

Failure to comply with provisions of this regulation will result in the levy of fines of not less than \$ 100.00, but no more than \$1000.00. Each day's failure to comply with the provisions of this regulation shall constitute a separate violation.

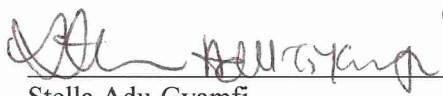

Section VIII. SEVERABILITY

Each provision of this regulation shall be construed as separate to the end that, if any provision, or sentence, clause or phrase thereof, shall be held invalid for any reason, the remainder of that section and all other sections shall continue in full force and effect.

These Regulations were voted into effect on July 30, 2019 by a unanimous vote of the Holden Board of Health.
